Abstract—This paper proposes Defferent Neural Network Models for attributing dialogues on Literary Texts. Quote Attribution, is the problem of tagging the dialogues with the speaker, is import for task like deanonymizing blogs, article or documents published illegally over world wide web. We used Recurrent Neuaral Models with defferent cells to establish the advantages and weak points among them.

Index Terms—Natural Language Processing, Neural Networks, Machine Learning

I. INTRODUCTION

Conversation is the fundamental means for human interaction. Having back and forth interaction helps to understand the way one thinks, thus having a mutual understanding. Its the beauty of brain how after a prolonged observation of same person conversing it starts to infer patterns. These patterns can either be the repetition of words or unique grammatical structure.
